

JD - Associate Software Engineer

As an Associate Software Engineer, you will be part of a collaborative development team responsible for designing, coding, testing, and supporting software solutions. This entry-level role is ideal for individuals who are passionate about technology and eager to build a strong foundation in software engineering through hands-on experience, mentorship, and structured learning.

Key Responsibilities

- **Software Development**
 - Assist in the design, development, and maintenance of applications using modern programming languages and frameworks.
 - Write clean, scalable, and well-documented code under the guidance of senior developers.
 - Participate in code reviews and implement feedback to improve code quality.
- **Testing & Debugging**
 - Develop and execute unit and integration tests to ensure software reliability and performance.
 - Identify and troubleshoot bugs or issues during development and after deployment.
- **Team Collaboration**
 - Collaborate with cross-functional teams including designers, QA engineers, and DevOps to deliver end-to-end solutions.
 - Attend daily standups, sprint planning, and retrospectives as part of Agile development cycles.
- **Learning & Development**
 - Continuously improve technical skills through hands-on work, mentorship, and learning platforms.
 - Stay updated with the latest trends and best practices in software engineering.
- **Documentation**
 - Contribute to project documentation, including technical specifications and user guides.

Required Skills & Experience

- 0–2 years of experience in software development (internships or academic projects welcome).
- Familiarity with one or more programming languages: Python, Java, C#, JavaScript, or similar.
- Basic understanding of web technologies (HTML, CSS, REST APIs) or backend development.
- Exposure to databases like SQL Server, MySQL, or MongoDB.
- Good problem-solving and logical thinking abilities.
- Team player with effective communication and collaboration skills.
